Sequence 5, Application US/07846181

Patent No. 5360732

GENERAL INFORMATION:

APPLICANT: BERKA, RANDY M

APPLICANT: FOWLER, TIMOTHY

APPLICANT: FOWLER, TIMOTHY

APPLICANT: FOWLER, TROTHY

TITLE OF INVENTION: PRODUCTION OF ASPERGILLUS NIGER

TITLE OF INVENTION: CATALASE-R

NUMBER OF SEQUENCES: 9

CORRESPENDENCE ADDRESS:

ADDRESSE: GENENCOR INTERNATIONAL, INC.

STREET: 180 KIRBALL WAY

CITY: SOUTH SAN FRANCISCO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COMPUTER READABLE FORM:

Sequence 2, Application US/09061768A

Patent No. 6204037

GENERAL INFORMATION:

APPLICANT: BRASH, ALAN R.

APPLICANT: BRASH, MITSUO

TITLE OF INVENTION: LIFOXYGENASE PROTEINS AND NUCLEIC ACIDS

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

ADDRESSEE: ALTALES A. TAYLOR, JR.

STREET: SUITE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD

CITY: DURHAM

STREET: SOUTH CAROLINA

COUNTRY: USA

ZIP: 27707

MEDIUM TYPE: Diskette, 3.50 inch, 1.4 MB storage

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette, 3.50 inch, 1.4 MB storage

COMPUTER: IBM PC/XT/AT compatible

OPERATING SYSTEM: WINDOWS 3.1

SOFTWARE: WORD PERFECT 6.1 and ASCII

Patent No. 6008201

GENERAL INFORMATION:
APPLICANT: Riley M.D., Lee W.
TITLE OF INVENTION: Uptake of Mycobacterium Tuberculosis and Uses thereof NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Nixon, Hargrave, Devans & Doyle
STREET: Clinton Square, P.O. Box 1051

CITY: Rochester
STREET: U.S.A.
                                                                                                                                                                                                                  OTHER INFORMATION: Description of Unknown Organism: Known Member of OTHER INFORMATION: Matrix Metalloproteinase Family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 11, Application US/08448489

Patent No. 6184022

GENERAL INFORMATION:
APPLICANT: SEIKI, Motoharu
APPLICANT: SINAGAMA, Akira
APPLICANT: SINAGAMA, Akira
APPLICANT: SINAGAMA, Akira
FILLE REFERENCE: 55-290P

CURRENT APPLICATION NUMBER: US/08/448,489
                                                     Sequence 22, Application US/08704711A
Patent No. 6114159
GENERAL INFORMATION:
APPLICANT: WILL, HOTST
APPLICANT: HINZMANN, Bernd
TITLE OF INVENTION: DNA SEQUENCES FOR MATRIX
TITLE OF INVENTION: MATALLOPROTEASES, THEIR PRODUCTION AND USE
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Folley & Lardner
STREET: 3000 K Street, N.W., Suite 500

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-08-689-411-2

Sequence 2, Application US/08689411

Patent No. 62248H

GENERAL INFORMATION:

APPLICANT: Riley M.D., Lee W.

APPLICANT: Chong, Pele

TITLE OF INVENTION: CELLULAR UPTAKE OF MYCOBACTERIUM TUBERCULOSIS AND USES

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

CORRESPONDENCES: 14

CORRESPONDENCE ADDRESS:
                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: Riley M.D., Lee W.
APPLICANT: Riley M.D., Lee W.
TITLE OF INVENTION: Uptake of Mycobacterium Tuberculosis and Uses thereof

Catalase (EC 1.11.1.6) - Arabidopsis thaliana
NiAlternate names: protein M4E13.140
Cispecies: Arabidopsis thaliana (mouse-ear cress)
Cispecies: 105779; S18972
Riberan, M.; Purnelle, B.; Boutry, M.; Goffeau, A.; Hoheisel, J.; Mewes, H.W.; Mayer, submitted to the Protein Sequence Database, April 1998
A; Reference number: 215451
A; Accession: T05779
A; Molecule type: DNA
A; Residues: 1-492 < ABEV >
